

TOP TIPS FOR BATHROOM BUYERS

Your bathroom is your own personal space. It is the one place you can be you - alone without any prying eyes.

We at Cannadines can help you choose the bathroom of your dreams. We offer personalised service in a market place of abundant choice, helping you make the right decision.

Bathrooms are investments and they need to last. But that doesn't mean they have to cost the earth. Whatever your budget, we'll help you get the best value for your money.

Bathrooms are like people. They come in all shapes and sizes. At Cannadines, we act as tailors to give you the best bathroom to meet your needs and space.

Some key points to consider:

- Family bathrooms: A family bathroom requires more storage space for multiple users. Ideally, a shower enclosure and a bath or, a shower fitted over the bath for the more compact room. A shower screen makes this possible.
- Bath shower screens: The best are double screens that keep water contained within the bath.
- Showers, baths or both: Do you like standing under a shower or prefer to luxuriate in a bath? Or are you a morning shower person and an evening bath person? Your daily rituals will decide for you.
- Baths are 'my time' to relax: Invest in a good deep bath that you unwind in. Traditional and modern styles to suit different tastes.
- En-suite bathroom: For couples sharing a bathroom, two basins for his and her area is worth considering. Bathroom mirrors and storage space for two sets of toiletries
- Heating: Sleek towel rails give a bathroom a contemporary look. You will always be ensured of crisp, dry towels with an electric element for summer months. There are also traditional options and radiators for additional heat.
- Cloakrooms: Often small, so space is at a premium. There are many compact toilet suites and basins with storage to suit tiny spaces.
- Toilets: If installation permits, consider a back-to-wall option that conceals the unsightly soil pipe and makes for easy cleaning.
- Shower enclosures: An increasingly popular choice as people opt for showers in place of baths. Quick, easy to clean, and environmentally-friendly for modern day living.

- Shower valves: A solid wall needs a surface mounted valve whereas a stud wall allows you to choose between a concealed or surface mounted valve. Check with your installer.
- Taps and mixers: Go for aerated taps to avoid splashing and reduce water consumption. Choose taps that are consistent with the look of your bathroom. Not all taps function on low pressure so check first.
